

WaveCentral

operator

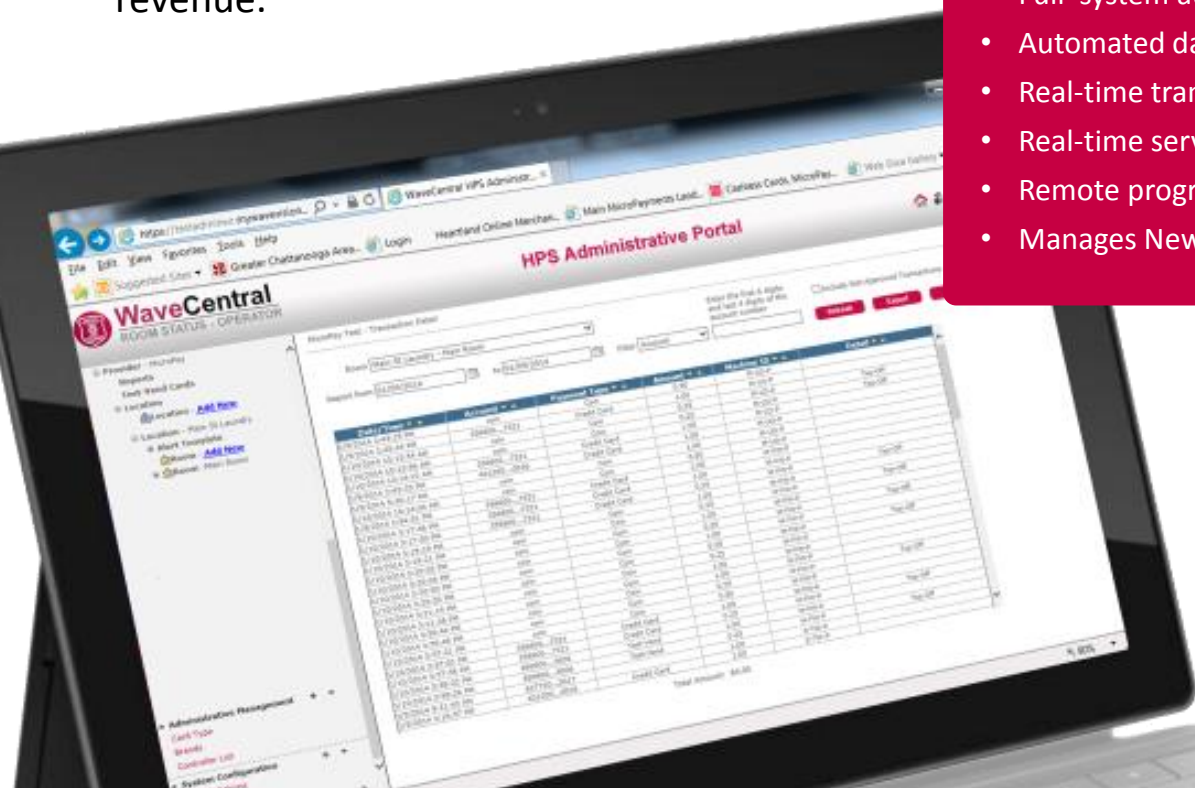

The WaveCentral system is Heartland's way of ensuring that you stay connected to your laundry facilities. If you can get to the net - via a browser on a PC, tablet, or mobile device – then you can always know what's happening , on demand.

Because WaveCentral is cloud-based , there is no need to maintain locally installed programs, or worry about version conflicts with newer operating systems. You simply open a web browser, log in, and you're in control.

Designed exclusively for the WaveRider Laundry System, WaveCentral allows you to have complete control and visibility of your properties' operational conditions and revenue.
