TLP**1024**B

SLIM

The TLPFUM-1024 units are constructed with heavy-duty solid steel, featuring 1 T-handle tubular lock with proprietary anti-vandal measures, including resistance against forced-entry attacks with specially designed access doors and concealed hinges. The Laundry Pass add-value stations are designed to service high-volume traffic with ease through the use of a unique contactless card reader, that enables fast turnaround through RFID technology.

Each station comes outfitted with a two-line bright readout, showing the current status, and the card balance and amount paid, upon sensing a contactless card. The unit can also be managed locally through the included configuration keyboard, obviating the need for network connectivity.
